

*We share the same planet. We share a commitment to take care of our planet. If we share in a process, we can all make a difference.*

## introducing the Steelcase Environmental Partnership Program

As we continue to design and manufacture more environmentally responsible products, we also recognize that many customers are looking for ways to lessen the environmental impact of furniture they no longer use. The Steelcase Environmental Partnership Program is the industry's most comprehensive program designed to connect customers with environmentally responsible after use strategies for their Steelcase furniture.

The Environmental Partnership Program supports our Life Cycle Thinking approach to product design and development – one that considers the potential environmental impact of all stages of a product's life – from materials selection to end-of-use strategies.

### how it works

Steelcase and its dealers will help customers – on a case-by-case basis – evaluate, select and connect to an environmentally responsible method of managing their product at the end of its intended use. Leveraging our extensive local dealer network along with a national network of recyclers, resellers and non-profit agencies, we can provide a variety of alternatives to sending unused furniture into landfills. Depending on the type and quantity of furniture involved, one of these options could be selected as a more viable –greener–choice:

- Recycle – with the goal of minimizing the amount of waste put into a landfill
- Resell – for use by another business
- Donate – to a non-profit agency
- Refurbish – for customer re-use

To take advantage of this program or to learn more, contact your local Steelcase dealer or visit [www.steelcase.com](http://www.steelcase.com) and enter "Environmental Partnership" in the search field.
